

JOHN HENRY NEWMAN ACADEMY

Maths Vision & Principles

Our school's vision and principles for Maths

At John Henry Newman Academy we value a maths curriculum that is both creative and engaging. It is our intention that all pupils are provided with the best possible learning opportunities, using teaching strategies which are proven to be effective and evidence based. We follow a 'maths mastery approach' to teaching which gives children the opportunity to develop their fluency in number, practise maths in context and to develop resilience when challenged with problem solving type activities.

Maths teaching and learning at JHN is good when;

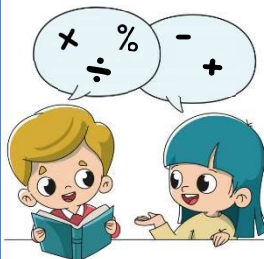

we are hands on and use physical resources to explore maths.

we have practical experiences based on everyday life.

we are asking key questions using Mathematical vocabulary.

we are working as a team.

we are curious.
